

A Letter from the Founder

I founded JTurbo with a simple conviction: the world deserves better energy solutions—cleaner, faster, and more affordable.

For too long, liquefaction has been constrained by cost, inefficiency, and complexity. JTurbo was built to change that. Today, our breakthrough technology demonstrates what's possible: reducing costs, lowering energy consumption, and enabling sustainable fuels Hydrogen and Renewable Bio-Gas (RBG) to scale with efficiency and reliability.

But our vision extends beyond innovation. We are here to help power the world's most critical infrastructure—data centers, industries, and nations—with the fuels of the future. At JTurbo, we are committed to accelerating the global transition to a cleaner, more sustainable planet.

This is only the beginning, and I invite you to join us on this journey.

A handwritten signature in black ink, appearing to read "J. Thomas", written over a horizontal line.

With determination,
Jacob Thomas
Founder & CEO, JTurbo
